

ABSTRACT:

METHOD AND DEVICE FOR PULVERIZING AND GRANULATING MELTS

5

In a process for pulverizing and granulating melts, especially oxidic slag, glass, or thermoplastic melts, in which the melts are heated with burner (6) in an antechamber (5) and ejected as a shroud surrounding a propellant stream into a granulating chamber (11),

10 hot combustion gases from the antechamber (5) are mixed with the propellant stream.
